

附表 1 几丁质酶的来源、催化特性、生化特征及生防信息

Annexed table 1 Source, catalytic and biochemical characteristics, and biological control information of chitinase

| 来源 Source | 几丁质酶的名字 Chitinase name | GH 家族 GH family | 分子量 Molecular Weight/kDa | 最适 pH Optimal pH | 最适温度 Optimal temperature/ ℃ | 催化特性 Catalytic characteristics | 靶标生物 Target organism | 作用方式 Mode of action | 参考文献 Reference |
|--|---------------------------|--------------------|-----------------------------|---------------------|-----------------------------------|-----------------------------------|--|---|-------------------|
| 细菌几丁质酶 Chitinases from bacteria | | | | | | | | | |
| 嗜麦芽寡养单胞菌 <i>Stenotrophomonas maltophilia</i> | | | | | | | | | |
| | | GH18 | 52 | 6.8 | 45 | | 丝核菌属 <i>Rhizoctonia</i> | 对植物病原真菌有明 显的拮抗作用 | [40] |
| | | | | | | | 镰刀菌属 <i>Fusarium</i> | Significant antagonism towards phytopathogen | |
| | | | | | | | 链格孢属 <i>Alternaria</i> | fungi | |
| 嗜盐菌 CECT 395 <i>Halobacterium salinarum</i> CECT 395 | HsChiA1p | GH18 | 66.5 | 7.3 | 40 | | 几丁质废物 Chitin waste | 生物降解 Biodegradation | [41] |
| 木聚糖类芽孢杆菌 Z2-4 <i>Paenibacillus xylanexedens</i> Z2-4 | PxChi52 | GH18 | 55.5 | 4.5 | 65 | 几丁质结合基 序(SxGG)和催 化基序(DxDxE) | 六出花链格孢 <i>A. alstroemeriae</i> 黑曲霉 <i>Aspergillus niger</i> 灰霉菌 <i>Botrytis cinerea</i> 和 the catalytic motif (DxDxE) | 抑制菌丝延伸 Inhibitions of hyphal extension | [44] |
| | | | | | | | 立枯丝核菌 <i>R. solani</i> | | |
| | | | | | | | 核盘菌 <i>Sclerotinia sclerotiorum</i> | | |
| | | | | | | | 苹果腐烂病菌 <i>Valsa mali</i> | | |
| 真菌几丁质酶 Chitinases from fungi | | | | | | | | | |
| 家蚕微孢子虫 <i>Nosema bombycis</i> | NbchiA | GH19 | na | 7.0 | 40 | na | 围食膜和几丁质基质 Peritrophic membrane (PM) and chitin substrates | na | [45] |
| 哈茨木霉 | Chit42 | GH18 | na | na | na | 深层基质结合 | 真菌 | 降解真菌细胞壁 | [47] |

| | | | | | | | | | |
|--|---------------|------|-------|-------|------|--|--|---|--|
| <i>Trichoderma harzianum</i> | | | | | | | 凹槽 Deep substrate binding groove 有一个较浅、较开放的底物结合位点和七个糖结合子位点 Have a shallower and more open substrate binding site and seven subsites for sugar binding | Fungal 真菌 Fungal | Degradation of the cell wall of fungus 降解真菌细胞壁 [47] |
| 木霉菌 <i>Trichoderma</i> sp. | Ech30 | GH18 | 30 | na | na | | | Degradation of the cell wall of fungus 降解真菌细胞壁 [47] Degradation of the cell wall of fungus | |
| 绿色木霉 <i>T. viride</i> | na | na | 30-80 | 5、7、9 | 4-70 | na | 鳞翅目家蚕的围食膜 The PM of the lepidopteran <i>Bombyx mori</i> | 损害 PM 的屏障功能 Impair the barrier function of the PM [26] | |
| 病毒几丁质酶 Chitinase from viruses | | | | | | | | | |
| Epinotia aporema Granulovirus | Ac-chiAEpapGV | na | 63 | 7 | na | na | Anticarsia gemmatalis 幼虫的围食膜 PM of <i>Anticarsia gemmatalis</i> larvae | 损害围食膜 Damages PM (peritrophic membrane) [49] | |
| 菜青虫 <i>Pieris rapae</i> | PiraGV-K | GH18 | 72、70 | na | na | 多域 Multiple domains | 昆虫 Insect | 在蜕皮过程中对旧角质层的消化作用，促进宿主的液化 Function in the digestion of the old cuticle during molting promoting liquefaction of the host [50] | |
| <i>Autographa californica nucleopolyhedrovirus</i> | AcNPV-Chi | GH18 | 50 | na | na | 几丁质酶 A N 域, 糖 18 域 Chitinase A N domain, and glyco18 domain | 蜡螟幼虫 <i>Galleria mellonella</i> larvae | 对幼虫的杀虫效果 Insecticidal effects on larvae [51] | |
| <i>Cydia pomonella granulovirus</i> | CpGV-Chi | GH18 | 63 | na | na | 几丁质酶 A N | 蜡螟幼虫 | 对幼虫的杀虫效果 [51] | |

| | | | | | | | | | | | | | | | | |
|---|-----------------------------|------|------|----|----|---|--|---|------|--|--|--|--|--|--|--|
| 思茅松毛虫的核型多角体病毒 <i>Dendrolimus kikuchii</i> Matsumura nucleopolyhedrovirus | DkChi | GH18 | 61.6 | na | na | 域, 糖 18 域 Chitinase A N domain, and glyco18 domain PKD1 域 催化域 PKD1 domain catalytic domain | <i>Galleria mellonella</i> | Insecticidal effects on | [52] | | | | | | | |
| | | | | | | | larvae | larvae | | | | | | | | |
| | | | | | | | 甜菜夜蛾 <i>Spodoptera exigua</i> | 强杀虫活性 | | | | | | | | |
| | | | | | | | 美国白蛾 <i>Hyphantria cunea</i> | Strong insecticidal activity | | | | | | | | |
| | | | | | | | 棉铃虫 <i>Helicoverpa armigera</i> | | | | | | | | | |
| | | | | | | | 舞毒蛾 <i>Lymantria dispar</i> | | | | | | | | | |
| | | | | | | | 家蚕 <i>Bombyx mori</i> | 增强 PM 的渗透性 | | | | | | | | |
| | | | | | | | 绿棉铃虫 <i>Heliothis virescens</i> | Enhanced the permeability of the PM | [53] | | | | | | | |
| | | | | | | | 链格孢菌 <i>A. alternata</i> | 抑制植物病原真菌的孢子萌发和生长 | | | | | | | | |
| | | | | | | | | Inhibited spore germination and growth of the phytopatogenic fungus | | | | | | | | |
| 植物几丁质酶 | | | | | | | | | | | | | | | | |
| Chitinase from plants | | | | | | | | | | | | | | | | |
| 大麦(<i>Hordeum vulgare</i> L.)品种 Haider-93 Barley (<i>Hordeum vulgare</i> L.) variety Haider-93 | 几丁质酶I基因 chitinase I gene | na | 35 | na | na | na | 番茄早疫病菌 <i>A. solani</i> | 增强对病原真菌的抵抗 | [56] | | | | | | | |
| | | | | | | | 镰刀菌属 <i>Fusarium spp.</i> | Increase the resistance to | | | | | | | | |
| | | | | | | | 黄萎病菌 <i>Verticillium dahliae</i> | fungal pathogens | | | | | | | | |
| | | | | | | | 立枯丝核菌 <i>Rhizoctonia solani</i> | | | | | | | | | |
| | | | | | | | 红腐病 Red rot disease | 有效控制 Effective control | | | | | | | | |
| 大麦几丁质酶II类基因 Barley chitinase class-II gene | SCT-15 SCT-20 | na | na | na | na | 使用启动子 Using promoter | 菜豆壳球孢菌 2165 菌株 <i>Macrophomina phaseolina</i> strain 2165 | 拮抗病原真菌 Against the fungal pathogen | [57] | | | | | | | |
| | | | | | | | | | | | | | | | | |
| 蛾豆(<i>Phaseolus aconitifolius</i>) moth beans (<i>Phaseolus aconitifolius</i>) | na | na | 30 | 5 | 40 | na | | | [58] | | | | | | | |

| | | | | | | | | | |
|--|--------|------|--------|-----|-------|--|--|--|---------|
| 尖葫芦种子 <i>Trichosanthes dioica</i> seed | TDSC | na | 39 ± 1 | 5-8 | 50-60 | na | 黑曲霉 <i>A. niger</i> 木霉 <i>Trichoderma</i> sp. | 展示出抗真菌活性 Showed antifungal activity | [59] |
| 宏基因组几丁质酶 Chitinase from metagenome | | | | | | | | | |
| 土壤 Soil | | | | | | | | | |
| Chi18H8 | GH18 | 46 | <6 | 35 | | 催化域 Catalytic domain 插入域 Insertion domain | 禾谷镰刀菌 <i>F. graminearum</i> 立枯丝核菌 <i>R. solani</i> 尖孢镰刀菌 <i>F. oxosporum</i> 炭疽病菌 <i>Colletotrichum gloeosporioides</i> | 抗真菌活性 抑制生长 Antifungal activity Inhibited growth | [27-28] |
| 青藏高原的湿地 The wetlands on Qinghai-Tibetan Plateau | P1724 | GH18 | na | 6 | 45 | 两个 GH18 结构域同时具有几丁质内切酶和几丁质外切酶活性 Two GH18 domains showed both endochitinase and exochitinase activities | na | na | [64] |
| 中国红树林潮滩土壤的宏基因组 The metagenome in the soil of a mangrove tidal flat in China | ChiT-7 | GH18 | 46 | 6 | 45 | 插入结构域 Insertion domain | na | na | [65] |
